

Ben Taub General Hospital

Building Description

Ben Taub General Hospital has garnered the respect of the world as an elite Level 1 Trauma Center, one of only two in the Harris County area. The 650 licensed-bed acute care facility is one of the nation's busiest trauma centers, caring for over 100,000 emergency patients each year.

The Problem

The hospital's eight and fifteen inch I.D. sanitary sewer drain line system was experiencing frequent blockages and backups due to a longitudinal crack along the eight inch line. As an added problem, a previously

abandoned manhole was pushing debris into the fifteen-inch sanitary sewer drain line. The biggest issue for the hospital was determining how to repair the line while keeping the sanitary sewer system in operation 24/7.

"Ben Taub Hospital needed
a sewer system line repair
that could be completed
while the line remained
operational. Fortunately, our
CIPP restoration technology
was able to provide a solution
that met both the challenge
of repair and the hospital's
operational needs."
TDT Project Manager.

The Solution

The Operations Manager contacted TDT Plumbing after learning about its Cured-In-Place Pipe restoration technology. He knew that a conventional open cut repair / replacement was not an option due to the logistics of the pipe and the fact the sanitary sewer system had to remain in operation 24/7. After assessing the problem, TDT Plumbing designed and executed a rehabilitation plan that required the fabrication and installation of an eight and fifteen inch I.D. x 140 foot long polyester needle felt liner saturated with a resin. The design strategy involved keeping the sanitary sewer in operation while repairing the damage with a CIPP Liner installation.

The Result

TDT Plumbing was able to restore and extend the operational life cycle of the previously failing sanitary sewer system. The line remained in operation throughout the repair, saving the hospital a substantial amount of money while minimizing disruption to daily operations.
