

ePIPE's Patented Technology Wins Facility Management Plumbing Vision Award

Facility management industry award recognizes Pipe Restoration Technologies, LLC, the makers of ePIPE[®], for its innovation and excellence in demonstrating cost saving, efficiency, technological advancement and tenant/occupant satisfaction within the plumbing industry.

The Vision Awards honor innovation and excellence in products that contribute to the efficient and profitable operations and management of institutional and commercial buildings in the United States.

ePIPE is a patented proven process that restores potable water pipes "in-place". An alternative to a re-pipe, restoring pipes "In-place" means less destruction and disruption to building tenants or occupants. The less intrusive ePIPE option and ability to provide customers with water back on the same day, means less downtime, which equals considerable savings to our satisfied customers.

"We are honored to be recognized for the contribution and value our product brings to the plumbing industry benefiting building occupants and owners," said Larry Gillanders, CEO Pipe Restoration Technologies, LLC

More than 150 products were reviewed in this year's Vision Awards program. The entries were judged by an independent panel of six facilities executives: Jennifer DuPlessis, Executive Director of Finance, Carrollton-Farmer's Branch (Texas) Independent School District, Andrew Baxter, Facilities Management Director, Pasco County, Fla., Ryan Rose, Associate Director of Engineering, The Wharton School, University of Pennsylvania, Cesar Sanchez, Director of Operations, University of California, San Francisco, Mike Blackerby, Director of Operations, Camden County (Ga.) School System, Darin Hargraves, Senior Director of Maintenance and Operations at Anchorage School District.

About ePIPE®

With over 40 US and International patents, the ePIPE process involves restoring pipes in-place, with an application of an approved epoxy barrier coating resulting in a restored and protected epoxy lined piping system. The process provides a solution for slab leaks, pinhole leaks, and the reduction of lead leaching from lead pipes and lead contributors. Service providers are located in the U.S., Canada, Mexico, Hong Kong, UK and Europe. For more information, contact ACE DuraFlo® Systems at www.epipeinfo.com or (866) 567-5106.
